

7th Annual NRF-SAIAB Student Symposium:

THE RIPPLE EFFECT: IMPACTFUL SCIENCE

Scientific research extends beyond the generation of knowledge—it informs our understanding of natural systems and guides efforts to protect and sustain them. In aquatic sciences, the questions we investigate and the findings we produce have far-reaching implications, influencing ecological management, community practices, and policy development. This student symposium showcases research conducted at NRF-SAIAB, highlighting the applied relevance and broader significance of the work. It emphasizes both the scientific contributions and the underlying motivations that drive inquiry in aquatic sciences.
